PROJECTS

Risk Assessment of Cyberattacks Using Bayesian Networks

[Link](#) - Jan 2025

- Designed and implemented a Bayesian Network model to assess the probabilistic risk of successful cyberattacks on network assets using real-world cybersecurity data.
- Analyzed pre-processed datasets to identify relationships between vulnerabilities, threat actors, attack vectors, and asset exploitation probabilities.
- Computed risk levels for various assets and developed a ranked list with actionable mitigation insights.
- Delivered data-driven strategies for prioritizing cybersecurity defenses.

Numerical Simulation of a Two-Stage Rocket

[Link](#) - Dec 2024

- This project simulates the vertical flight of a two-stage rocket by solving a **system of ordinary differential equations (ODEs)** numerically using `scipy.integrate.solve_ivp` with the RK45 method. The simulation accounts for quadratic air drag and gravitational forces but does not include parachute deployment during descent.
